

Saccharomonospora viridis K73T
RNase P RNA

The diagram illustrates the secondary structure of the *Saccharomonospora viridis* K73T RNase P RNA. The sequence is shown in a standard RNA notation (A, C, G, U). The structure features several stems, loops, and bulges, characteristic of a small ribonucleoprotein complex. Key structural elements include a large internal loop on the left, a long stem in the center, and a small loop at the bottom right. The sequence is written in a standard RNA notation with bases A, C, G, and U. Some bases are highlighted with dots or circles, possibly indicating modified nucleotides or specific structural sites. The overall structure is typical of a small ribonucleoprotein complex like RNase P.
